## Wanted functionality

Posted by Erik - 2007/09/24 12:22

---

Hi!!!

Great addition to the Joomla base of extensions. Will probably purchase TableBoss, but I haave some functionality that I hope you can add to future releases.

- 1: Customers being able to choose table by enabling the layout plan.
- 2: Ability to add SMS gateway code for confirmations.
- 3: Customers being able to add comment to reservation.
- 4: Ability to join two or more separate tables together for large parties.
- 5: Ability to have two or more separate "rooms" in the restaurant.

Thank you!

Hi Erik-

Thank you for the constructive comments. Some of these features (multiple rooms, joining tables) are planned for future releases already. We will take your other suggestions into consideration.

## Joining tables

---

Hi,

Joining tables is a must. On the demo I reserved 2 tables of 10 persons. My third reservation isn't possible the same time. I would be nice if the system could propose something.

Maybe it could be entered when creating the layout of the dining room. If there is a table A1 for 2 and a table A2 for 4 persons, it could be defined A1+A2 (6). This way the system could decide to use these two tables as one, when needed.

Any time frame for this?

Bye,  
Chris.

These features are being considered for development. There is no time frame that we can commit to.

Thanks for the feedback!
