## flexible table sizes etc

Posted by zehn - 2008/05/15 12:24

---

Hi, I'm very interested in purchasing this great product, however, before I fully commit myself, I'd like to ask a few quick questions.

1. Is it possible to have flexible tables? i.e. the system join 2 tables for a larger party etc.? I know this question has been asked >7 months ago. And your answer was that this was to be introduced into development? Has this happened? Or will it happen and if so when?
2. Our clients have a flexible way of allocating the number of available tables, i.e. during busy hours, they get a greater number of walk in guests, hence the number of tables allocated for pre-booking is lower and during less busy times, they can obviously offer a greater number of tables online. Is there any way of doing this?
3. How easy/difficult would it be to integrate TableBoss into an existing website? We currently run AMP on a oneandone.co.uk, linux based hosting. Our site is written in PHP. Would we be able to install Joomla on a new directory and link to just the reservation wizard through our existing webpages?

Thank you in advance for a wonderful package.

Kind regards,  
Zehn AL-Rashid

We are not sure if we will add the ability to Combine/Split tables due to the complexity, although we haven't ruled it out for a future release. We are exploring however reserving multiple tables simultaneously by dragging a marquee around them.

2. Our clients have a flexible way of allocating the number of available tables, i.e. during busy hours, they get a greater number of walk in guests, hence the number of tables allocated for pre-booking is lower and during less busy times, they can obviously offer a greater number of tables online. Is there any way of doing this?

The only way to control this now is to reserve tables at the times that you want to save for walk-ins manually via the "Reservation Desk". They will then not be available for reservation via the wizard.

3. How easy/difficult would it be to integrate TableBoss into an existing website? We currently run AMP on a oneandone.co.uk, linux based hosting. Our site is written in PHP. Would we be able to install Joomla on a new directory and link to just the reservation wizard through our existing webpages?

This is very doable. Please refer to this post. >>>

So from a non restaurateur...what's the work around for not being able to combine tables? Maybe call for reservations more than x number?

Also:

Are there any mootools issues I need to be aware of in regards to other templates? I.E Rocket Theme etc.?

Can the 1.5 Version be wrapped as a demo like the 1.0.x version in a previous post?

Cheers,

Rich
