Hi Pedro,

When reservations are made with the Reservation Desk, TableBoss does not send an email notifications. Notifications are only sent when reservations are made with the Reservation Wizard.

Regards,

Mark

How to insert the function send confirmation of the wizard mode in mode reservation desk mode.

```
$this->sendConfirmation();
}
}
```

```
function sendConfirmation(){
// check to see what we should should send out for mails
jimport('joomla.mail.mail');

$config =& TBConfiguration::getInstance();
if( $config->notificationEmail ){
$mailer =& JMail::getInstance('TB-public-notification');
$mailer->ContentType = 'text/html';
$mailer->CharSet = "UTF-8";
$mailer->From = $config->notificationFrom;
if( $config->notificationFromName ){
$mailer->FromName = $config->notificationFromName;
}
$mailer->AddReplyTo( $this->email, $this->name );
$mailer->Subject = $this->replaceVars( $config->notificationSubject );
$mailer->Body = $this->replaceVars( $config->notificationBody );
$mailer->AddAddress( $config->notificationEmail );
if( !empty( $config->notificationCC ) ){
$mailer->AddBCC( $config->notificationCC );
}
if( $config->attachReportToNotification ){
importplus( 'tableboss.report.report' );
$report =& TBReportMgr::create('reservations', array('filename'=>'Reservations', 'end'=>'none') );
$format = function_exists('iconv') ? 'xls' : 'csv';
$report->setFormat($format);
$mailer->AddStringAttachment( $report->toString(), $report->getFilename(), $format=='xls'?'binary':'base64', $report->getContentType() );
}
```

```
}
if( !$mailer->Send() ){
    $this->_logger->debug( "Error Sending Internal Mail" );
    jimport('joomla.filesystem.file');
    if( isset($path) && JFile::exists( $path ) ){
        JFile::delete( $path );
    }
}
}
}
if( $config->sendConfirmation ){
    $mailer =& JMail::getInstance('TB-public');
    $mailer->ContentType = 'text/html';
    $mailer->CharSet = "UTF-8";
    $from = $config->notificationFrom;
    if( $config->notificationFromName ){
        $from = array( $config->notificationFrom, $config->notificationFromName);
    }
    $mailer->setSender( $from );
    $mailer->setSubject( $this->replaceVars( $config->customerNotificationSubject ) );
    $mailer->setBody( $this->replaceVars( $config->customerNotificationBody ) );
    $mailer->addRecipient( $this->email );
    if( !$mailer->Send() ){
        $this->_logger->debug( "Error Sending Internal Mail" );
    }
}
}
```

Hi Pedro,

Did you found a solution for this problem, i have the same problem here.

Regards
Boris
