## Adding additional fields

Posted by Jon - 2009/01/25 10:25

Hi,

I saw it's possible for the admin to change the duration of a lunch or dinner.  
How could I tweak tableboss in such a way that users could select this as one of the booking steps.

I now have a starting time which is from 10AM-3PM so I want a duration field after this one selection their end time (say 1PM) rather than just giving them a list with 1hr-2hrs-...

I think I've tackled it almost myself. The data is being pulled in through the `_default_load` function in `tb.public.js` but this one is only being executed once.  
I need to find a function where I can change my `onSelect` eventlistener where I can pass the items from the previous field (starting time) to the next field (end time) end just delete the first hour in the list. I've looked in `ux.select` and `ux.select2` but I cant seem to find it.

Cheers

=====
