
Search Engine Friendly URLs

Posted by ansiar1 - 2009/12/31 05:09

Good morning, I have just installed joomla Tableboss on 1.5.15 and with joomfish installed, does anyone know if either activating tableboss friendly URL?, If the asset fails me, but if I turn off works well.

Thank you very much.

Hi ansiar-

The product should work fine with standard SEO and has been tested with Joomfish, but there may be issues if there is a newer version than what we had tested. If you provide us a super administrator login (send to support@tableboss.com), we will look into it and see if we can debug it for you.

Best Regards-
Mark
