## Translation into another language wizard

Posted by ansiar1 - 2010/02/02 01:26

---

I have my website in various languages and want to know how to put in another language the content of the wizard, I put an explanatory text in Spanish and, and I like that when you change language, the translated text to display. How can I do? and how she could send emails to the person in my restaurant booking in your language. I mean the language that was booked in my restaurant.

Thank you very much in advance.

I autoresponder, and put it here in case anyone needs it.

There is. Xml that solves my office and introduced joomfish translate option.

To translate what you have just needed to get off "TableBoss ContentElement Version 2.2" and then install it from joomfish translate as ever.

I hope that someone can serve.
